

Kemet Diamond Compound for aluminium polishing

Kemet International Ltd, the leaders in precision polishing technology since 1953, have now made the life of mould polishers much easier. Their team of industrial chemists have listened closely to the polishing requirements of today's mould polishers and have developed an extremely effective, high concentration diamond compound for polishing aluminium.

Advantages

- Extremely heavy diamond concentration
- Oil Soluble
- Very heat stable - does not break down under heat and pressure, for example when polishing with felts.
- With a 3 Micron Diamond Compound, you can go straight from a stoned finish to a mirror polish.
